

The Reproductive Health Research Institute (RHRI) conducts new research for women's health, with a particular focus on reproductive endocrinology.

RHRI has developed groundbreaking medical protocols for treating a wide range of hormonal disorders, ovarian dysfunction, menopause and infertility.

Research areas:

- Fertility
- Ovulatory dysfunction
- Hormones and the brain

Medical management training courses for health professionals.

In-depth examination of reproductive physiology and endocrinology.

Overview of RHRI diagnostic & treatment protocols  
Patient case study models.

Patient care

Health education.

World wide patient care network

Web based support for RHRI medical doctors

**RHRI**

REPRODUCTIVE  
HEALTH RESEARCH  
INSTITUTE

*medical management for doctors*

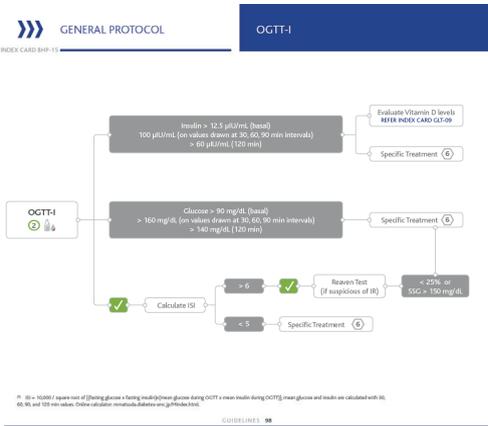

The **Reproductive Health Research Institute (RHRI)** is a research center founded in 2014. It works to improve women's health by developing research and creating clinical protocols and advancing scientific knowledge, particularly in the area of reproductive endocrinology. .

## OUR TEAM

The RHRI is a multidisciplinary group of researchers that include medical doctors, reproductive endocrinologists, neurobiologists, ecologists, nurses and psychologists. The Institute is led by Dr. Pilar Vigil (MD, PhD, OB/GYN, FACOG) and Dr. Patricio Contreras (MD, PhD, medical endocrinologist)

RHRI and FEMM are able to offer CME credits for medical training through the NY State Medical Board

The medical training developed by RHRI offers sensitive diagnosis and treatment for symptoms of pain, headache, anxiety, fatigue, weight gain, hirsutism, and acne. The protocols address the underlying hormonal disturbances causing conditions such as ovulatory dysfunction, polycystic ovaries, thyroid problems, endometriosis, infertility, menopausal disorders, and depression.

**RHRI** develops medical protocols for treating a wide range of hormonal disorders. These protocols are scientifically based and standardize the latest advances in biomedical research for clinical use. RHRI trains doctors around the world.

We conduct new research for women's health, with a particular focus on reproductive endocrinology.
